What to do if you have confirmed or suspected coronavirus disease (COVID-19)

If you are sick and have been diagnosed with COVID-19 or suspected to have COVID-19 because you have been exposed to someone with COVID-19, follow the steps below to help prevent the disease from spreading to people in your home and community.

Symptoms of COVID-19

The most common symptoms of COVID-19 are fever, cough and shortness of breath. If you have been exposed to someone with laboratory confirmed COVID-19 and are experiencing fever with either cough or shortness of breath, you might have COVID-19. You can contact your doctor to see if you need to be tested. If you have tested positive for COVID- 19 or are suspected to have COVID-19 but are not tested, you should follow the below instructions.

Stay home except to get medical care

You should restrict activities outside your home, except for getting medical care. Do not go to work, school, or public areas. Avoid using public transportation, ride-sharing, or taxis.

Separate yourself from other people and animals in your home

People: As much as possible, you should stay in a specific room and away from other people in your home. Also, you should use a separate bathroom, if available.

Animals: You should restrict contact with pets and other animals while sick. When possible, have another member of your household care for your animals while you are sick; if you must care for your pet, wash your hands before and after you interact with pets and wear a facemask.

Call ahead before visiting your doctor

If you have a medical appointment, call the healthcare provider and tell them that you have or may have COVID-19. This will help the healthcare provider's office take steps to keep other people from getting infected or exposed.

Wear a facemask

You should wear a facemask when you are around other people (e.g., sharing a room or vehicle) or pets and before you enter a healthcare provider's office. If you are not able to wear a facemask (for example, because it causes trouble breathing), then people who live with you should not be in the same room with you, or they should wear a facemask if they enter your room.

Cover your coughs and sneezes

Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can; immediately clean your hands as described below.
